REPORT.

TO HIS EXCELLENCY JOHN POYNTZ, EARL SPENCER, K.G.
LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

Queen's University, Dublin Castle,
April 1, 1870.

May it please your Excellency,

In the absence of the Earl of Clarendon, Chancellor of the Queen's University in Ireland, it becomes my duty as Vice-Chancellor, in compliance with the provisions of Her Majesty's Charter, to furnish to your Excellency the Report of the Condition and Progress of the University since the 1st April, 1869.

The General University Examinations during the period of this Report commenced on the 28th of September, and terminated on the 25th of October, 1869. Examinations for Degrees in the Faculty of Medicine were also held in June, and First University Examinations in Arts and Engineering were also held in April. At these various Examinations 445* Candidates presented themselves. Lists of those who were successful are annexed, and a App. II. List of the Students Matriculated in the University since the first of October last.

In addition to these Examinations for Members of the University, Examinations of Candidates who are not Members were held in the month of June. Lists of those who were successful are App. II. annexed.

The principal public meeting of the University, to confer degrees and diplomas, and distribute prizes, and which your Excellency

* In this number the same persons are counted twice wherever they underwent two distinct University Examinations within the year. This happened in 91 cases, so that the number of individuals examined was 364.

was pleased to honour with y^r presence, was held in St. Patrick's Hall, Dublin Castle, on the 14th of October last. An account of the proceedings is appended to this Report.

The following papers are also added for your Excellency's information.

- App. III. The Estimate for the year.
 App. IV. The Cash Account for the year.
 App. V. A Return of the several Meetings of the Senate since my last Report.

I have the honour to be,

Your Excellency's

Obedient and faithful Servant,

MAZELINE BRADY,

Vice-Chancellor.

APPENDIX.

APPENDIX I.

PUBLIC MEETING of the QUEEN'S UNIVERSITY in IRELAND, held in St. Patrick's Hall, Dublin Castle, on the 14th October, 1869. Appendix
I.
Public Meeting.

AFTER the close of the examinations of the year 1869, a public meeting of the Queen's University was held in Dublin Castle on the 14th October, 1869, for conferring degrees, diplomas, and prizes.

A large number of distinguished persons having taken their places in the Examination Hall, the Lord Chief Baron as Pro-Vice-Chancellor of the University, the Senate, the Professors and Examiners, and the Candidates, entered it in procession.

The PRO-VICE-CHANCELLOR opened the meeting with the following address :—

In the absence of the Chancellor and Vice-Chancellor of the University, the duty had devolved upon him, by desire of the Senate, and as next senior member of the Senate, of taking the part usually taken by the Vice-Chancellor in the proceedings of the University. It had been usual on those occasions to make a short statement, conveying what had occurred chiefly as the fruits of the year's study, and showing the state of the Colleges in connexion with the examinations since the last annual meeting. A statement on that subject had been provided, and, in conformity with the ordinary usage, he now proceeded to state the results. The number of students in the three colleges of the Queen's University had been 740 in the academic year just concluded. Of those, 214 were members of the Established Church, 170 were Roman Catholics, 236 were Presbyterians, and the remaining 93 belonged to other smaller denominations. Three hundred and two candidates had attended the University examinations of this year. That was the number of separate individuals, not counting twice those who might within the year have attended two University examinations. Of those candidates, 73 had undergone the first University examination in the curriculum for the degree of Bachelor in Arts, and of those the answering of 53 had been deemed satisfactory by the examiners. Fifty-four had presented themselves at the degree examination, of whom 43 had been successful, and would receive their degrees to-day (applause). In the faculty of medicine, the most important part of what composed the system of education in that University, 124 candidates had undergone the first University examination, and 62 the degree examination. Of the 124, 92 had been successful at the first examination, and no fewer than 50 of the 62 had succeeded at the final examination (applause). Thirty-two out of 40 candidates had passed the special examination for the degree of Master in Surgery. Some of those who had during the year passed for the degree of doctor of medicine or of master in surgery had graduated in June last, and would receive their degrees to-day. In engineering 21 candidates had presented themselves at the first University examination, of whom 16 had been successful; and 14 had been candidates at the degree examination, of whom 12 had been successful. By the grace of the Senate the degree of doctor of medicine, *honoris causa*, would to-day be conferred on Dr. Hodges, Professor of Agriculture (applause):

The several prizes founded by public subscription, which had been set on foot by Sir Robert Peel, and to which Sir Robert Peel himself so largely, and he would say so munificently contributed, had been successfully competed for during the year. Of these two exhibitions had been awarded at the examinations just passed, and 34 prizes in composition. Those exhibitions were tenable by each recipient only on the condition of his distinguishing himself in the subsequent part of his course, and several of the candidates who had most distinguished themselves at the examinations which had just taken place in the last month had thereby entitled themselves to the instalments of those exhibitions, which they would receive to-day. What he had now stated indicated the success which had attended the efforts of the youth instructed in the Queen's Colleges, by their attaining distinction in the examinations which were to attest their progress. What he was now about to state would show, by tracking their entrance into active life, what might be the result of successful and persevering study for the individual who thus prepared himself for those labours that were ultimately to form the foundation, not merely of his livelihood, but probably of his subsequent honour and success in life (applause). The following gentlemen had successfully competed for places in the Civil Service of India. He was sure none of his hearers required to be told of the vast field for ambition, for the application of knowledge, and for the exercise of intellect which that great quarter of the world—if it might be called so—afforded to those who prepared themselves for service there.

John S. Halliday, of Queen's College, Belfast, B.A., 1869; J. L. Denniston, of Queen's College, Belfast; James E. Murphy, of Queen's College, Belfast, M.A., 1867, who competed successfully for this service in a former year, has, in the present year, been awarded three prizes of £50 each when passing his final examination—one for political economy, and two for vernacular languages.

The following gentlemen had competed successfully for places in the Army Medical Service:—

Jobart C. Hudson, Queen's College, Belfast, M.D. and M.CH.; Gordon Price, Queen's College, Belfast, M.D., and M.CH.; William Price, Queen's College, M.D., and M.CH.; John G. Thornley, Queen's College, Belfast, M.D.; G. M'Bride Davis, Queen's College, Belfast, M.D., M.CH.; Michael E. Murphy, Queen's College, Galway, M.D., M.CH.; William J. Hastings, Queen's College, Cork, M.D., M.CH.; Daniel N. Martin, Queen's College, Cork, M.D., M.CH.; John Lloyd, Queen's College, Cork, M.D., M.CH.; Arthur V. Smyth, Queen's College, Cork, First Medical Examination; Frederick C. Barker, Queen's College, Belfast, M.D.; William Sharpe, Queen's College, Galway, M.D., M.CH. Dr. Chatterton, who took first place last year at the same competition, has this year again obtained the first place at the final examination, which takes place in this department among those who have obtained places at the competitive examination of the previous year.

In the Naval Medical Service the following gentlemen had successfully competed:—

Richard A. Mowll, Queen's College, Cork; John B. Isaac, Queen's College, Cork; Charles F. K. Murray, Queen's College, Galway; Thomas O'Sullivan, Queen's College, Galway; Henry G. Smyth, Queen's College, Cork. Of these gentlemen, Mr. Murray obtained first place at the competition.

The following gentlemen had successfully competed for places in the Public Works Department of India:—

David M'Mordie, Queen's College, Belfast; Hugh G. M'Kinney,

Queen's College, Galway; William Good, Queen's College, Cork; Philip J. Large, Queen's College, Cork; Charles R. Burke, Queen's College, Cork; J. H. Thornhill, Queen's College, Cork.

Appendix.
I.
Public
Meeting.

There were others who obtained employment in departments not perhaps so conspicuous but still attesting high qualifications in the successful candidates:—

John James Charles, Queen's College Belfast, M.D., M.A., has been appointed Demonstrator of Anatomy in Queen's College, Belfast. John Bell Millar, Queen's College, Belfast, M.A., has been appointed an Assistant Professor in Owen's College, Manchester. J. H. Shaw, Queen's College, Belfast, M.A., has been appointed a Professor of Magee College. John Park, Queen's College, Belfast, M.A., has been appointed Professor of Logic and Metaphysics in Queen's College, Belfast. John Hunter, Queen's College, Belfast, M.A., was appointed Chemical Analyst, Deep Sea Exploring Expedition, under the Admiralty and Royal Society.

Mr. John Perry, of Belfast, obtained the Whitworth Prize; Mr. Samuel Dill, of Belfast, obtained a double first at Oxford, and was now lecturer at Lincoln College, and Fellow of Corpus Christi. These were the practical results of the teaching of those Colleges, tested by the examinations of the University this year, and by the other circumstances to which he had referred. The subject of education in general, the subject above all, of academic education, had been the theme of much discussion and of great controversy. It had been the subject of discussion in recent days, and it would largely be discussed before much time should have passed over us. He did not think that either the time or the occasion to express any views of his own, or to suggest the adoption of those views by others. The subject was one which had sounded, and would sound the very profoundest depths of opinion and of sentiment, political, social, and religious. Into the controversy connected with such a discussion it would, of course, be most unbecoming in him to enter. All that he would do would be to express an earnest hope that whatever modifications might be made in existing institutions, or whatever arrangements might be made connected with its great objects, due regard would be had first to the great and main consideration, never to let down the standard of knowledge, and secondly that due regard should be had to the proved efficiency of existing institutions (applause). It only remained now for him to perform the duty which, as he had said, by the absence of the Chancellor and Vice-Chancellor, and by desire of the Senate, it had become his function to perform. He could not do so without deeply lamenting the cause which had occasioned this duty to devolve upon him. He did not like to trust himself much, because of the strong, long-continued, and earnest friendship, which had subsisted from their very earliest years between him and the Vice-Chancellor of the University, in speaking upon the subject. This he thought he might be permitted to say, that he hoped, and he believed all who heard him were disposed to agree in that hope, that the cause of his absence would be but temporary, and that before any considerable time should have elapsed—and indeed he hoped a very short lapse of time—he would give them again the benefit of his enlarged knowledge, of his intelligence, care, and assiduity in watching over the interests of those institutions, of his great experience, of his remarkable aptitude for business, and of that which so distinguished him amongst his other high endowments—his sound, clear, cautious, sagacious judgment (applause). The duty now devolved upon him of conferring the degrees, and he hoped his Excellency would favour them by distributing the prizes (applause).

The LORD CHIEF BARON said the pleasing duty now devolved upon

Appendix.
 I.
 Public
 Meeting.

him of tendering to his Excellency the most cordial thanks of the University, for his presence, for his having undertaken the task of distributing the prizes, and for the accommodation of the magnificent hall in which they were assembled (loud applause). He trusted that the fruits of the past year of the Queen's University had not been without interest to his Excellency, and should they on future occasions have the honour and happiness of meeting his Excellency again, he trusted it would be found that the future would at least be equal to the past (loud applause).

His EXCELLENCY then rose and said—My Lord Chief Baron, Ladies, and Gentlemen,—I thank you most sincerely for the kind manner in which you have received me here to-day. I may assure you that it is a matter of unmixed satisfaction to me to follow the example of my many distinguished predecessors, and to have been able to lend this hall to the proceedings of your University. I may assure you that I will give place to none of my predecessors in the deep interest which I feel in this University (applause). I must express my deep regret at the cause which prevents your Vice-Chancellor, to whom allusion has in such excellent and admirable terms been made by the Chief Baron, from being here to-day. I need not add a word to the eloquent expressions which were made use of by the Chief Baron with regard to Sir Maziere Brady, but I most certainly trust that on the next occasion when your University meets here we shall find that the rest which his prolonged and laborious efforts have now needed may restore him to perfect health and vigour to assist at the ceremony which is always of such interest at this time of the year (applause). I say that I feel the deepest interest in this University, and I am glad to be able to show, not only as representative of Her Majesty, but as a member of Her Majesty's Government, the great importance which they attach to this institution (applause). Her Majesty's Government in Ireland must always be intimately connected with the Queen's University, and the Queen's Colleges at Galway, Cork, and Belfast; for, by the constitution of those colleges, it devolves upon Her Majesty's Government in this country to appoint the professors to those colleges. That is a matter of very grave responsibility.

I am happy to think that during the many years that have elapsed since these colleges have been instituted, one motive has, I believe, actuated every succeeding Government in this country. That motive has been to fill those offices in the most efficient manner, and to select those who were best fitted to occupy those important posts (applause). I believe that my illustrious predecessors and your Vice-Chancellor, from the very outset of these colleges, laid down as a maxim that on no account should any political interest be allowed to interfere in those appointments. Her Majesty's present Government most earnestly and deeply feel the importance of that maxim, and in all the appointments that it may be their lot to fill they will only study the efficiency of the University. I believe the practice has always been that, when there has been a vacancy in one of the chairs at any of the different colleges, a list of candidates has been sent to the President of the College, and I believe there has hardly been any instance in which the recommendation of the President of the College and the Vice-Chancellor of the University has not been adopted by Her Majesty's Government (applause). I believe that it is of the utmost importance in every department of the State that the first consideration should be the efficiency of those who are appointed to it. Efficiency is necessary for the public service, and I believe that in no department is it more important than in those that are connected with the education of the youth of the country (applause). The importance of your institution I need not dwell on at any length to-

day. It is well known what service the Queen's University and the colleges attached to it have done to the education of the country. It would be presumptuous in me to enlarge on the necessity of education in every country, but I know that you will all agree that in a constitutional country, where self-government is the law it is doubly important that every class of the community should have a large and enlightened education. It is on the intelligent and educated people that the Government must rely for support in maintaining loyalty and good order (applause).

Appendix.

Public Meeting.

Now, I believe that of late years a very great impetus has been given to education in the United Kingdom by the system which has been adopted of holding up public places and the public service to open competition. I believe that that has increased the desire for sound, good, and enlightened education. Ireland has had her full share in the benefit of these appointments, and I believe that nothing has contributed more to the success of Ireland in these appointments than the education which has been given by these colleges (applause). I need not dwell at length on the different fields which are open in the public service. We have heard read to-day by the Chief Baron a list of those who have distinguished themselves in India. A finer field for intellect and for energy I cannot conceive than the public service of this country in India. The value that is attached to the education given here is shown remarkably by the gentleman who was one of the first—I am not sure that he was not the very first—who took honors in open competition for the public service in India. I allude to Mr. West (great applause). Mr. West has risen to a high place in the Civil Service in India, and on the first visit that he makes to England he seizes the opportunity of taking his Master's degree in the Queen's University in Ireland. But the wish of the University to keep pace with the requirements of education in the country, and with the requirements of the public service, is shown by the degrees which it confers in different services. If we look at medicine, we find a very great proportion of the candidates for examination here attached to the medical school. A more useful and honourable profession I cannot conceive than that (applause). We have seen to-day a large number of candidates for honors in medicine, which show how much the education held out by the Queen's University in medicine is valued in this country. I believe that lately, even during the last examination, some alterations have been made to improve the curriculum of education for medicine, and I understand that it is the intention of the Senate still farther to improve that education.

If we look at another department, which is one of growing importance in this country, we find that the University gives degrees in Civil Engineering, and I am told that there is no department in the system of education which does more credit to the University than the department of Civil Engineering. We find those who have got the diploma of Civil Engineering from this University doing excellent work for themselves and honour to their country in different parts of the world. We find them engaged in the United States, we find them in South America. If we go to the other department, the Faculty of Arts, we find that most eminently successful; and I may here point out a remarkable thing with regard to those who seek degrees in arts in this University: that nearly all those who were candidates for these honors—I believe as regards the Masters of Arts almost the whole number—were not content with taking the pass degree but went out in honors; and the same with regard to those who seek the bachelor's degree in arts. I believe the greater proportion of them sought and obtained honors in their examination.

*Appendix.*I.
Public
Meeting.

Now, to what is that to be attributed? I believe it is to be attributed to some enlightened changes that were made in 1858 with regard to the examinations which candidates can select for themselves. Before that the final examination was very general and very wide. Since 1858, in the first examination, it is necessary to pass a certain degree in classics, and I believe in mathematics. In the second examination a greater latitude is given to the students in the University. That, I believe, is a step in the right direction, and the number of those who went out in honors shows to me that it has been successful. That has been one of the great changes, I believe, in the education of this country, for it is now ascertained that after a certain amount of preliminary education it is not right or necessary that all men or all youths should follow the same track. It is acknowledged now that men's minds are not all moulded in the same form, that one man may succeed in classics, while another may succeed in mathematics, or in any other branch of education. It is, therefore, most important to give an opportunity, after a certain time, to a young man to select that branch of science or education in which he feels he has particular qualifications. That, I believe, has been successfully done, as I have shown, by this University. But I have noticed that not only do they follow the different courses of education which are open to them, but some, I see, enter for several of them.

One name I shall notice which was received with great applause—I think he was from Galway. He took a first honor in one class—that of Ancient Classics, and he took a second and third in two other branches of education which are open to the students (applause). That did him great honour, and it shows the elasticity with which the arrangements of the University are made to meet the different wants of the students. I need not dwell upon the success during the past year of this University. I was glad to hear from the Chief Baron, when he opened the proceedings, of the large number of candidates who have come for examination before the University. We have heard of the large number who have been successful in examination for the public service. We were told that in the Indian Civil Service there were two successful; in the Public Works in India, six were successful; in the Army Medical Service there were twelve, and in the Navy five. That, I think, shows how excellent is the education given by the University. But there is one name I should like to mention, for it shows the great distinction which can be acquired through this University. I see that a member of your University—Mr. Dill—obtained a double first at Oxford, and a Fellowship at Corpus Christi (great applause)—honors of which the University may well feel proud.

I shall not detain you very much longer. I only wish to address a few words to those who have been successful in the competitions to-day. They must know that their success to-day is only the first step in what ought to be, and may be, their future uniform course. It is true that school and college are mere imitation and examples of the world in which we live afterwards, but if a man goes successfully through school and college he may hope to achieve distinction in after life. That I sincerely trust may be the case with those who have been successful here to-day. I trust that in the battle of life they may go forth and win deserved success; that they may find honourable work that they ought to do, and earn not only fame for themselves, but a good name for their country, and for this University to which they owe so much (loud applause).

The Viceroyal party then withdrew, and the proceedings terminated.
